---

AI

---

---

• Jetzica v1/v2 (2021–2023) — Designed conversational chatbot with Dialogflow for automatic quotation request registration via WhatsApp. Automatic quotation flow with product scoring and confidence threshold.

Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/15211855/Jetzica+v2>

• Vertex AI (2023) — Implemented vehicular application predictions with caching to reduce model consumption (EC-4976).

Source: <https://jetzappmx.atlassian.net/browse/EC-4976>

• Vector Search & RAG (2024) — Researched semantic search with MongoDB Atlas Vector Search and embeddings for recommendation engine and audio-based search.

Source:

<https://jetzappmx.atlassian.net/wiki/pages/viewpageattachments.action?pageId=15213647>

• Jetzica v3 — OpenAI LLM (2025–2026) — Migrated from Dialogflow to GPT with specialized prompts for multi-product quotation, balance queries, orders, and 100% company-personalized FAQs.

Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/15215293/Jetzica+v3>

• OpenAI Codex & Rovo AI (2026) — Adopted Codex CLI for TDD-accelerated development and Rovo AI workflow for automated PR description generation.

Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/15217505/Codex>

• Duet AI (2023) — Early evaluation of Google AI assistant for coding, Cloud Ops, and BigQuery queries.

Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/15211947/Duet+AI>

---

---

## CLOUD

---

---

- Multi-Cloud Architecture (2021–2026) — Designed and operated hybrid AWS + GCP infrastructure: AWS API Gateway as frontend, GCP Cloud Run as backend, S3 for storage, BigQuery for analytics. 3 GCP projects (dev, sandbox, production).  
Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/15205494>
- 11+ Serverless Cloud Functions (2021–2026) — Pub/Sub-triggered and HTTP microservices: product imports, cost calculations, vehicle sync, supplier integrations.  
Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/15217465/jetz-cloud-functions>
- Cloud Tasks for Bulk Payments (2023) — Architectural decision AWS SQS vs GCP Cloud Tasks, selecting Cloud Tasks for ordered and guaranteed processing.  
Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/15217161>
- SSE Streaming on Cloud Run (2026) — Server-Sent Events with Redis pub/sub for progressive real-time delivery of search results (Metacotizador).  
Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/804028417>
- Cloud Cost Optimization (2026) — Reduced GCP, Google Workspace, and BigQuery spend.  
Sources: CLOUD-23, CLOUD-27, JS2-3691
- Multi-Environment CI/CD (2026) — Enabled sandbox-b as independent environment with isolated pipelines, API Gateways, and URLs.  
Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/696352777>

---

---

## SOFTWARE ARCHITECTURE

---

---

- SaaS Platform with 10+ Components — ERP (Vue.js), Intranet (Vue.js), Contact Center (React), Inbox (React), Backend (Node.js/Cloud Run), Cloud Functions, Mobile (Flutter/Clean Architecture), Products microservice, Public API, DevOps tooling.  
Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/15204358>
- Clean Architecture Mobile (2025) — Defined layered architecture (Presentation > Application/BLoCs > Domain > Infrastructure) with strict dependency rule.

Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/15217383>

- Event-Driven Architecture (2023–2026) — Pub/Sub for import triggers, Cloud Tasks for guaranteed payment processing, Redis pub/sub for streaming.
- Search Engine 2.0 (2023) — Migrated to ElasticSearch with Spanish-language indices, relevance scoring, and AI-powered application matching.  
Source: <https://jetzappmx.atlassian.net/browse/EC-4905>
- Adapter Pattern for Integrations (2026) — Implemented adapters for external suppliers (Serva, Optimo) with login, code-based search, and exact match.  
Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/706805779>
- Public REST API (2026) — API for business partners: auto parts catalog, quotation requests, webhooks for quotations, direct orders.  
Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/15204676>
- Async Export Architecture (2026) — Asynchronous pattern with Cloud Tasks for bulk inventory and order export to CSV/S3.  
Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/843251713>

---

---

## ENGINEERING LEADERSHIP

---

---

- Led engineering team of 8–12 across 4 squads (Product, Software Development, Data & Search, Cloud & Platform).  
Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/15216127>
- Learnings Program (2022–2026) — Internal training system with bi-weekly tech talks. Delivered: GCP, OKRs/KPIs, WhatsApp Groups, Business Verticals 2025.  
Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/15210169>
- AWS Well-Architected Framework (2025) — Adopted as guide for architecture decisions (Operational Excellence, Security, Reliability, Performance, Cost).  
Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/15205494>
- Pipeline Optimization Strategy (2026) — Reduced CI/CD time from 7 min to 2:20 min (-67%): parallelism, pnpm, Oxlint, delta analysis.  
Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/632684545>

- Branching Strategy & Environment Flow (2026) — Formal Gitflow + sprint-based releases with dev > sandbox (QA) > production.

Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/655818753>

- Security: pnpm Migration (2026) — Led npm to pnpm migration in 4 priority phases to reduce supply chain vulnerabilities.

Sources: SEC-107 to SEC-111

- Security Roadmap (2025) — Multi-phase roadmap: risk assessment, LOPDP compliance, pen testing, access controls.

Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/15216303>

- Inclusive Hiring (2023) — Designed inclusive recruitment practices with objective tools (HackerRank, TripleByte), diverse panels, and neutral language.

Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/15209445>

- Knowledge Transfer Plan (2026) — Formal handoff plan for critical areas (Cloud & Platform, Support) with documentation, shadowing, and checklists.

Source: <https://jetzappmx.atlassian.net/wiki/spaces/EC/pages/853344259>

---

---

## BUSINESS IMPACT

---

---

- Quotation Automation — Jetzica AI replaced manual quotation process. Chatbot registers requests, scores products with AI, and sends automatic quotations when score exceeds threshold, eliminating human latency.

- Cloud Cost Reduction — Decommissioned legacy search engine (EC-5157), optimized BigQuery (JS2-3691), optimized GCP and Google Workspace (CLOUD-23, CLOUD-27).

- CI/CD: -67% Time — Pipeline optimization from 7 min to 2:20 min per commit, multiplied across all team developers.

- Multi-Supplier Integration — 5+ suppliers connected in real-time (Autotodo, Ciosa, Serva, Dapesa, ROA, Optimo) with dynamic brand discovery and checkpoint-based resilience.

- WhatsApp Direct Integration — Migrated from Twilio to direct Meta API, reducing dependency and per-message cost.

- Availability — Resolved production replication lag, transactional server errors, billing token failures (DAT-2000, JS2-2579, EC-7986).

- Security: Supply Chain — Migrated to pnpm + updated axios to mitigate vulnerabilities in 4 prioritized rounds.

---

---

## CV BULLETS (ENGLISH — HIGH IMPACT)

---

---

1. Architected and operated a multi-cloud platform (GCP + AWS) serving an automotive B2B SaaS with 10+ microservices, handling real-time inventory, quotation, billing, logistics, and POS for multiple retail operations across Mexico.

2. Built an AI-powered quotation chatbot (Jetzica) that evolved from Dialogflow to OpenAI GPT, automating multi-product quotation via WhatsApp and reducing response time from hours to seconds for thousands of monthly customer interactions.

3. Designed and deployed 11+ serverless microservices on GCP Cloud Functions with Pub/Sub triggers, processing product imports, cost calculations, vehicle data sync, and real-time supplier integrations.

4. Integrated 5+ external supplier catalogs in real-time (Autotodo, Ciosa, Serva, Dapesa, Optimo) using adapter patterns with dynamic brand discovery and checkpoint-based resilience, expanding available SKU coverage by 10x.

5. Reduced CI/CD pipeline execution time by 67% (7 min to 2:20 min per commit) through parallelism, pnpm migration, Rust-based linting (Oxlint), and delta analysis — saving ~5 minutes per push across all team members.

6. Led an engineering team of 8–12 across 4 squads (Product, Software Development, Data & Search, Cloud & Platform), defining OKRs, running bi-weekly learning sessions, and establishing career paths with cloud certifications.

7. Designed and implemented SSE-based real-time streaming architecture on Cloud Run with Redis pub/sub, replacing push notifications and enabling progressive delivery of search results to the end user.

8. Migrated core search engine to Elasticsearch (Buscador 2.0), configuring Spanish-language indices, relevance scoring, and AI-powered application matching — then decommissioned legacy search to reduce cloud costs.

9. Drove cloud cost optimization initiatives reducing BigQuery, GCP compute, and Google Workspace spend through resource right-sizing, payment method optimization, and decommissioning of unused services.

10. Replaced third-party messaging middleware (Twilio) with direct Meta WhatsApp API integration, cutting per-message costs and enabling advanced features (groups, templates, media) natively across the contact center.

11. Defined and executed a Security Roadmap including pnpm supply-chain migration (4 priority rounds), S3 ACL hardening, SonarQube static analysis, and LOPDP compliance planning, reducing critical vulnerabilities to zero.

12. Established engineering culture and processes: Gitflow branching strategy with sprint-based releases, AWS Well-Architected Framework adoption, inclusive hiring practices, structured knowledge transfer plans, and systematic tech talks since 2022.
